

User Acceptance Criteria VoiceOver Accessibility Testing Notes

Testing Environment

Testing was performed using Apple VoiceOver on a mobile device.

Findings

1. On mobile, the persistent Donate button is positioned on the right side of the screen. VoiceOver frequently focuses on the scroll bar instead, making the button difficult to access.
2. The 'Learn More' and 'Get Involved' buttons are announced only as 'visited link' and do not appear to activate correctly when selected.
3. Page scrolling occasionally skips major content sections while navigating with VoiceOver.
4. Major pages, including Land Conservation, have descriptive image alt text and are read correctly by the screen reader.
5. On the Explore Our Preserves page, the text beginning with 'Explore more than...' is split into multiple text elements, causing VoiceOver to read the content in separate fragments rather than as one continuous section.
6. The Donate link in the primary navigation is announced only as 'visited link' and could not be activated during testing. However, the persistent Donate button functions correctly once it receives focus.
7. On mobile, selecting the Search button does not automatically display the on-screen keyboard, preventing users from entering a search query. Automatically opening the keyboard when search is activated would improve accessibility.
